HUMANITARIAN AID • INTRODUCTION

FOOD WITH DIGNITY

Food solutions to support people and communities in emergency and vulnerable situations.

Food support in crisis situations

In contexts of conflict, disaster or displacement, access to meals becomes a priority. Food support must consider the needs of people and the conditions of each community.

From preparation to distribution

Plan quantities, drinking water, kitchen equipment and utensils to organize the meal service. Storage, hygiene and preparation instructions for each product must guide the entire process.

A people-centered response

Distribution must respect dignity, dietary habits and the specific needs of those receiving support. Collaboration with local organizations allows the response to be adapted to each context.

HUMANITARIAN AID • INTRODUCTION

ALI100H2O
NUTRITIOUS BY NATURE, ESSENTIAL BY CHOICE.

FOOD ASSISTANCE PROGRAM

In emergency and vulnerable situations, food assistance is part of the response to the essential needs of people and communities.

The organization of supply must consider the number of people, the duration of the assistance, food habits and local conditions for preparation and distribution.

ALI100H2O institutional products can be integrated into food assistance actions, in coordination with the entities responsible for each operation.

Illustrative image

OBJECTIVES OF THE FOOD ASSISTANCE PROGRAM

1. Support access to meals in emergency situations.
2. Contribute to supporting families and communities in vulnerable situations.
3. Plan supply quantities and frequency in accordance with each operation.
4. Respect the dignity and food habits of the supported populations.
5. Coordinate distribution with local entities and teams.
6. Consider the composition of the products, allergens and specific needs.
7. Verify the availability of safe drinking water, equipment and preparation conditions.
8. Comply with the storage, hygiene and preparation instructions for each product.
9. Monitor distribution and adjust supply to reduce waste.

HUMANITARIAN AID

Supporting people. Respecting communities.

- Emergencies and disasters
- Families in vulnerable situations
- Refugees and displaced persons
- Communities affected by conflicts

INSTITUTIONAL PRODUCTS • ALI100H₂O

FOOD DEHYDRATION

Learn the process. Understand the benefits.

ALI100H₂O
NUTRITIOUS BY NATURE, ESSENTIAL BY CHOICE.

From nature's ingredients to your table

01 PRESERVATION

Dehydration removes part of the water from foods and reduces the water available for the growth of bacteria, yeasts and molds. It is a widely used preservation method that ensures safety throughout the process, from packaging to storage conditions.

02 HOW IT WORKS

In thermal drying, the water from solid or liquid foods evaporates, generally at low temperatures and boiling points. Temperature, humidity and air flow are controlled. Heat is transferred to the food and the water vapor is transported to the outside.

03 NUTRITIONAL QUALITY

The retention of nutrients depends on the food and the drying conditions. Minerals, such as selenium, potassium and magnesium, are generally well preserved; vitamins, including vitamin A, may suffer losses. The structure and texture can also change.

04 LACTIC CULTURES

Lactic acid bacteria can be sensitive to heat. Their preservation requires specific and controlled processes, such as lyophilization; survival also depends on the strain and the conditions used.

05 STORAGE AND TRANSPORT

Many dehydrated foods can be stored without refrigeration before preparation, according to the label. Proper packaging and a cool, dry place help preserve the product and can reduce logistics costs.

06 LESS WEIGHT

Removing water reduces weight and makes transport easier. A food with 90% water can, in theory, be about one-tenth of its original weight if that water is removed. The result varies with the residual moisture content.

07 REHYDRATION

Adding water allows many dehydrated foods to be reconstituted. The speed and result depend on porosity, the drying method and preparation. The original volume and texture are not always fully recovered.

HUMANITARIAN AID

Feeding people. Supporting communities.

Food support in action

01 LOGISTICS AND TRANSPORT

Dehydrated foods can make transport and space management easier, depending on the product and its packaging.

02 STORAGE

Follow the storage instructions on each product's label, ensuring suitable temperature and humidity conditions and protecting the packaging.

03 STOCK MANAGEMENT

Checking expiry dates and organising stock rotation helps plan supplies and reduce waste.

04 MEETING PEOPLE'S NEEDS

Product composition, allergens and dietary habits should guide product selection for each community.

05 ORGANISED PREPARATION

Plan for drinking water, equipment and teams, following the preparation instructions for each product.

06 LOCAL COORDINATION

Coordinate quantities, deliveries and distribution with the organisations responsible for the food support operation.

07 RESOURCE PLANNING

Assess the cost per meal, including the product, transport, water, energy and preparation.

More nutrition. Stronger communities. A better future.

ALI100H2O

Nutrition by nature, essential by choice.

PREPARATION FOR 1 KG

RISOTTO

1. 
Bring **4 liters** of water to a boil.

2. 
Add **1 kg** of the product to the boiling water, stirring well until completely dissolved.

3. 
Once it returns to a boil, cook over low heat for **20 to 25 minutes,** with the pan covered.

4. 
Ready to serve.

SOUP

1. 
Dissolve **1 kg** of the mixture in **8 liters** of lukewarm water and stir well.

2. 
Bring to a boil over high heat.

3. 
Once it boils, reduce the heat and cook for **15 minutes,** stirring constantly.

4. 
Ready to serve.

FLAVORED DRINK

1. 
Dissolve **1 kg** of the product in **10 liters** of cold or iced water (as preferred).

2. 
Stir well until completely dissolved.

3. 
Ready to serve.

DAIRY DRINK

1. 
Dissolve **1 kg** of the product in **5 liters** of hot, cold or iced water (according to your preference).

2. 
Stir well until completely dissolved.

3. 
Ready to serve.

Simple. Nutritious. Delicious.

www.ali100h2o.com | geral.ali100h2o@gmail.com | vb.ali100h2o@gmail.com

ALI100H2O

Nutritious by nature, essential by choice.

PREPARATION FOR 1 KG

PORRIDGE

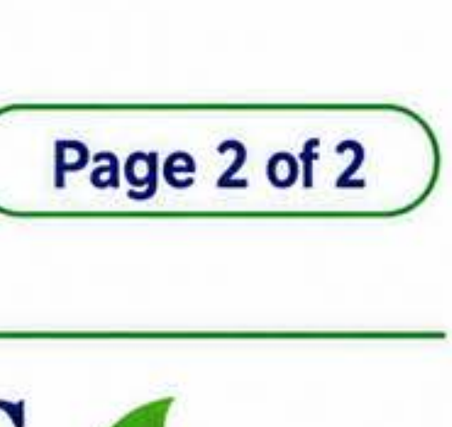

Dissolve **1 kg** of the product in **3 liters** of cold water and mix well.

Add another **3 liters** of hot water and bring to the stove.

After it starts to boil, cook over low heat for **2 minutes,** stirring constantly.

Ready to serve.

PASTA

Dissolve the contents of the **340 g** package fully with the **660 g** package of pasta in **4 liters** of water. Mix well until completely dissolved.

Bring to the stove until boiling.

Cook over low heat for approximately **15 minutes,** stirring constantly.

Ready to serve.

POLENTA

Dissolve **1 kg** of polenta in **5 L** of water.

Bring to a boil over high heat.

Reduce the heat and cook for **5 a 10 minutes.**

Serve immediately.
