Nourish to Care

INSTITUTIONAL PRODUCTS • INTRODUCTION

HUNGER IS A REALITY

Hunger deprives millions of people of the most basic right: access to nutritious and safe food.

What is hunger?

Hunger is the physiological sensation that indicates the need for food to sustain vital activities. The term also describes situations of poor nutrition or lack of food among populations, usually associated with poverty, conflicts, political instability or adverse agricultural conditions. When prolonged, hunger can compromise the development and functioning of the body. In extreme situations, it can lead to death from starvation.

Consequences of hunger

Lack of food can lead to weight loss in adults and developmental problems in children, limiting learning and productive capacity. Malnutrition, associated with insufficient energy and protein intake, reduces the ability to fight infections and increases the risk of mortality. Throughout history, hunger has been one of the greatest causes of suffering and death, affecting millions of people in different societies. Hunger and malnutrition reveal serious difficulties in accessing sufficient food.

Global hunger — historical context

The original document recalled an intervention by the then UN Secretary-General, Ban Ki-moon, on the difficultes faced by African countries in achieving, by 2015, the Millennium Development Goals established in 2000. It highlighted the sharp rise in food and gas prices as factors penalising the least developed countries, particularly in Africa.

850 → 925 million

Historical refereenes reproduced from the original document; they do not represent current data.

Increase in the number of people affected by hunger mentioned in the original for 2007.

FIGHT HUNGER

ALI100H2O exists to bring hope and nutrition where it is needed most.

• INTRODUCTION

COMBATING HUNGER

Hunger, destruction and poverty are problems that differ in nature, scale and development around the world, requiring solutions with different scopes, levels of investment and approaches.

Combating poverty helps combat hunger. In emergency situations, food distribution provides an immediate response to the needs of affected populations.

As part of the "World Without Hunger" emergency programme, the supply of institutional products is proposed for monthly distribution to families in need

Images for illustrative purposes

SPECIFIC OBJECTIVES

1. Take immediate action to combat hunger, poverty and undernutrition among populations in need.
2. Provide immediate assistance to families in need or affected by disasters.
3. Ensure nutritional support for populations that need it.
4. Support healthy ageing through improvements in nutritional status.
5. Improve the dietary conditions of vulnerable populations.
6. Contribute to the improvement of the nutritional status of supported populations.
7. Provide adequate nutritional support for the metabolic needs of populations.
8. Include dehydrated foods, with appropriate preparation and storage, to help reduce the risk of contamination.
9. Contribute to the prevention of health problems associated with poor nutrition.

INSTITUTIONAL PRODUCTS • ALI100H₂O

FOOD DEHYDRATION

Understand the process. Discover the benefits.

ALI100H₂O
NUTRITIOUS BY NATURE, ESSENTIAL BY CHOICE.

From ingredients to your table

01 PRESERVATION

Dehydration removes some of the water from food and reduces the water available for the growth of bacteria, yeasts and moulds. It is a widely used preservation method; safety depends on the process, packaging and storage conditions.

02 HOW IT WORKS

During thermal drying, water in solid or liquid foods evaporates, generally below its boiling point. Temperature, humidity and air circulation are controlled. The air transfers heat to the food and carries the water vapour away.

03 NUTRITIONAL QUALITY

Nutrient retention depends on the food and the drying conditions. Minerals such as selenium, potassium and magnesium are generally well preserved; vitamins, including vitamin A, may experience losses. Texture and structure may also change.

04 LACTIC ACID BACTERIA CULTURES

Lactic acid bacteria can be sensitive to heat. Their preservation requires specific and controlled processes, such as lyophilisation (freeze-drying); survival also depends on the strain and the conditions used.

05 STORAGE AND TRANSPORT

Many dehydrated foods can be stored without refrigeration before preparation, depending on the label. Appropriate packaging and a cool, dry place help preserve the product and may reduce logistics costs.

06 LIGHTER WEIGHT

Removing water reduces weight and makes transport easier. A food containing 90% water can, in theory, end up weighing about one tenth of its initial weight if that water is removed. The result varies with the residual moisture content.

07 REHYDRATION

Adding water allows many dehydrated foods to be reconstituted. The speed and result depend on the porosity, drying method and preparation. The original volume and texture are not always fully recovered.

ALI100H2O

Nutritious by nature, essential by choice.

PREPARATION FOR 1 KG

RISOTTO

1. 
Bring **4 litres** of water to the boil.

2. 
Add **1 kg** of product to the boiled water. Mix well until fully dispersed.

3. 
When it returns to the boil, simmer over low heat for **20–25 minutes,** with the pan covered.

4. 
Ready to serve.

SOUP

1. 
Dissolve **1 kg** of the mixture in **8 litres** of lukewarm water and mix well.

2. 
Bring to the boil over high heat.

3. 
Once boiling, reduce the heat and cook for **15 minutes,** stirring constantly.

4. 
Ready to serve.

FLAVOURED DRINK

1. 
Dissolve **1 kg** of product in **10 litres** of cold or chilled water, as preferred.

2. 
Stir well until completely dissolved.

3. 
Ready to serve.

DAIRY DRINK

1. 
Dissolve **1 kg** of product in **5 litres** of hot, cold or chilled water, according to preference.

2. 
Stir until completely dissolved.

3. 
Ready to serve.

Simple. Nutritious. Delicious.

ALI100H2O

Nutritious by nature, essential by choice.

PREPARATION FOR 1 KG

PORRIDGE

1

Dissolve **1 kg** of product in **3 litres** of cold water and mix well.

2

Add a further **3 litres** of hot water and place over the heat.

3

Once boiling, simmer over low heat for **2 minutes,** stirring constantly.

4

Ready to serve.

PASTA

1

Add the contents of the sauce packet **(340 g)** and the pasta packet **(660 g)** to **4 litres** of water. Mix well until the sauce mixture is completely dissolved.

2

Heat until boiling.

3

Simmer over low heat for approximately **15 minutes,** stirring constantly.

4

Ready to serve.

POLENTA

1

Dissolve **1 kg** of polenta in **5 L** of water.

2

Bring to the boil over high heat.

3

Reduce the heat and cook for **5–10 minutes.**

4

Serve immediately.

Simple. Nutritious. Delicious.
